

PART TIME SLABBING

Clip On Slabber

Do you want to make more money out of your timber? Higher prices can be obtained for wide slabs used for kitchen counters, picnic tables and up market bar tops. With the Peterson Clip On Slabber, you can do all this and more, simply and easily for very little investment.

The Clip On Slabber, with its innovative design, can cut extra wide slabs up to 5' (1.5m) wide and up to 8" (20cm) thick in minutes. From custom-order beams to live-edge tabletops, rustic indoor to outdoor furniture, the possibilities are endless with a Peterson Clip On Slabber.

An accessory for large frame models, this bar and chain attachment utilizes the mill's 4-stroke motive power and attaches to the blade boss on your existing mill. The chain is a specialized RX double skip ripping design, running at the same rpm as your blade.

The Clip on Slabber is now easier to attach to your mill for faster change over. Setup time is around 30 minutes the first time it is used, and will take only 10-15 minutes thereafter.

Planer Blade

For those finishing touches, try a Peterson Planer Blade for all your wider slabs and beams. Just mount this blade in place of your standard mill blade and skim over your sawn slab or timber, for planed results.

The specialized Planer Blade design has two types of teeth one for ripping and the second for planing. This means it can handle deep cuts and resawing in the one pass, and you do not have to skim over and over again to achieve your finish.

The Planer Blade offers the option of partially dressing the timber either green or dry. As the blade is quite large and takes large bites of up to 20mm deep and 150mm wide, it is perfect for thickening and leveling your slabs by removing all those warps and ridges after drying.

The Planer Blade is also useful to create slots and notches for things like mortice and tenon joints, or even slotting smaller logs for flower boxes.

The Peterson Planer Blade is highly recommended to work in conjunction with the Peterson Clip On Slabber to enhance those wide slabs and custom beams. You will be able to cut and finish much larger slabs and beams than any other sawmill can, and gain a valuable niche market for yourself. Make your Peterson mill even more profitable today!
